

Gutianshan CSP inventory 2008/2009 (CWD/FWD)

Lo- (location) W/C (whole/center plot)

#- Id number (same number for pieces of one tree)

Species- scientific name (unidentified is "?")

#Label- CWD tagging number (new)

dbh- diameter at breast height

d_{base}/d_{top}- diameter at base/ top of CWD

height / length- length of CWD

#NNLabel- number of reference tree

Dist. To NN- distance between CWD base and middle of reference tree

Azim. To NN- Azimuth of CWD measured from reference tree

CWD dir.- Azimuth of CWD top measured from CWD base

l/d- living or dead

Pos.- (position) **1** = Standing dead tree (top not broken) with all fine branches; **2** = Standing dead tree (top not broken) fine branches absent; **3** = Snag; top broken but still hanging onto snag; **4** = Snag, top broken and fallen off; **5** = Uprooted complete tree; **6** = Fallen entire dead tree (snapped near the base); **7** = Fallen snag; **8** = complete broken tree crown, **9** = branches, **10** = stump, **11** = unidentifiable

SC- (soil contact) estimate in %

MC- (mortality cause) **1** = snow break, **2** = accident, **3** = harvest, **4** = strangulation by lianas, **5** = unidentifiable

DC- (decay class) **1** = solid; not decayed; **2** = partly decayed, preferably sapwood, but cannot be smashed by stepping on it; knife does not fully penetrate; often piped by termites; **3** = strongly decayed; sapwood and heartwood soft and fragmented, collapse if you step on it; affected by termites

Remark- F=fungi, T=termite, R=rot and any other mark
